

McDonald's Franchisees Install Pathogen-Control Technology

McDonald's franchisees in three of the nation's largest cities – Chicago, Dallas and Houston – are using ultraviolet light technology to neutralize pathogens on restaurant surfaces and in the air.

"While we have already taken significant steps to help ensure the safety of our employees and customers, we believe the addition of **UV Angel technology is a true game-changer**"

"We want the air inside our locations to be as safe as the air outside, and we are proud to be one of the first restaurants in the world to add this technology to our **infection control arsenal**."

- Matt Kades, Houston-area McDonald's owner-operator.
